19th Annual Meeting & Scientific Session of the Academy of Microscope Enhanced Dentistry

A Clear Vision into the Future of Dentistry

OCTOBER 22-24

Featuring International World Renowned Speakers • Exhibits • Collaborative & Hands-On Training • & More

Dr. Enrico Cassai  Dr. Jorge Zapata
Dr. Juan Carlos Ortiz Hugues  Dr. Claudia Cotca
Dr. Ali Sadr  Dr. Thomas Kepic
Dr. Matthew Nejad  Dr. Randy Shoup
Dr. Richard Miron  Dr. Guillaume Jouanny
Dr. Bertrand Khayat  Dr. Larry Rifkin
Dr. Glenn van As  Angela Ward
Yukina Sugiyama  Yusuke Takayama
Junichi Watahiki  Dr. Thomas Wiedemann
Ian McNickle

CHICAGO BLACKSTONE MARRIOTT

P: 813.444.1011 | F: 813.422.7966 | 3820 Northdale Blvd., Suite 205A, Tampa, FL 33624
www.microscopedentistry.com
Over the past two decades dentistry has made important progresses, thanks to advancements in technology. Seeing is Believing: Application of Optical Coherence Tomography imaging and analytical methodologies to detect and monitor dental defects such as caries at various stages, cracks and compromised restorations can be done that is done from magnifying glasses to the operating Microscope. Thanks to this technology every clinician has the possibility today to perform operations with better predictability such as removing posts, fractured instruments, treating perforations or in the endodontic surgical field. Finally we will try to look to the future by thinking about what we can still expect in the micro-endodontic field.

Learning Objectives:
• Learn the main advantages in Microscopic Endodontic
• Learn how to better use the Microscope in different fields of endodontics: from diagnosis to instruments or posts removing
• Understand the real potential of doing endodontics under microscope and discover new future applications

MICRO AESTHETICS AND HEALTH
It is said “The Whole is the sum of its parts”. Facial aesthetics is a science and an art. Therefore, to deliver great results, we need to consider the whole face and not separate parts.

Learning Objectives:
• Attendee will learn the “WTF” of microscope-based dentistry
• Attendee will learn to choose the right microscope for every treatment
• Attendee will learn to select a few microscope cutting-edge capabilities of leading global laser laboratories as strategically featured innovation or already launched prototypes to current high level business client procurement.

Learning Objectives:
• Understand the application of optical physics to dentistry, specifically the unique aspect of tissues and microstructure
• Learning to appreciate and expect the future of laser technology including existing and developing unique cutting-edge laser application development currently featured in select optical laser laboratories and facilities
• Learn and appreciate the adaptation of laser technology to interdisciplinary dentistry case selection.

There is Nothing New Under the Sun. Lasers.

**Microscope in Endodontics 2020: Hands-On**
Enrico Cassai, DDS

**Course Description:**
The purpose of the workshop is to allow each participant to understand how to use an operating microscope at its best. During the workshop each participant will learn how to hold a comfortable and correct position to use the microscope in everyday clinical practice and how to improve and speed up operations with the assistant. Every participant will be treated with the microscope in order to improve one’s skills. As a final exercise, each participant will experience the advantages given by the microscope while removing a fiber post from a canal with ultrasonic tips and while obturating an open apex with MTA.

**Learning Objectives:**
- Learn the main positions and ergonomics in Microscopic Endodontics
- Improve the skills with a microscope doing some exercises
- Learn how to take advantage from the microscope to remove a fiber post from a canal in a safe way and how to obturate an open apex with MTA

**Hands-On: Get the Best out of Your Microscope in Endodontic Microsurgery**
Bertrand Khayat, DDS and Guillaume Jouanny, DDA

**Learning Objectives:**
- Master incision and suture techniques specific to endodontic microsurgery
- Perform apical retrograde preparation in the long axis of the canal on 3-6-9 mm
- Obturate the full length of retroprepared roots with longer pluggers

**Hands-On: How To Restore The Endodontically Treated Tooth**
Randy Shoup, DDS / Matthew Nejad

**Course Description:**
Everything from sealing the canals to the final restoration. Under the direction of Dr. Randy Shoup, a step by step approach along with supported scientifically based principals will be presented followed by a live demonstration with the techniques described performed on extracted untreated teeth. Learn the processes, products and equipment utilized to achieve success in treating the endodontically treated tooth. Learn techniques to utilize immediately and implement into your daily treatment. Attendees are invited to bring their own loupes or utilize the available microscope. During the course, demonstration equipment will be available for attendee use.

**Learning Objectives:**
- Understand the principles of bonding to deep dentin with the most current scientific understanding
- Effectively seal the gutta percha filled canals with a composite resin system prohibiting the contamination of the root canal system from coronal leakage
- Create a high molecular weight polyethylene fiber scaffolding matrix within the extruded pulp chamber
- Utilize new composite systems to create a dense and high adhesive core within the tooth
- Analyze and assess the remaining tooth structure; design a final restoration that reinforces the remaining healthy and sound tooth structure.

**Seeing the LIGHT! - Soft and Hard Tissue Lasers in General Practice - Hands-On Workshop**
Glenn A. van As, BSc, DMD

**Course Description:**
In this limited attendance hands on workshop attendees will see how dental lasers can be utilized to help with treatment outcomes in general practice. Soft tissue Diode lasers have become a go to piece of many dentists armamentarium for their role in tissue management, laser bleaching, soft tissue procedures such as frenectomies and lingual tongue tie release. Hard tissue lasers are able to be used for restorative preparations, as well as contouring of bone. Lasers do provide an alternative to many procedures but many clinicians are confused by which laser might be the best for their practice. In this “See, Show, Do” hands-on workshop attendees will first SEE some clinical cases documented through microphotography and videography captured by the dental operating microscope. A live demonstration under the scope will SHOW how soft and hard tissue lasers can be used. The latter part of the session will then be used by attendees to try for themselves both soft tissue diode lasers and “all tissue” lasers while using a table top mounted microscope on pig jigs. See how lasers can become an important part of the armamentarium for your dental practice.

**Learning Objectives:**
- Discover the various wavelengths present in dentistry and see how they might be relevant for your practice
- See how soft tissue diode lasers can be utilized for tissue management and in the delivery of minor soft tissue surgical procedures.
- Realize how “all tissue” erbium lasers can be used for restorative dentistry and in the ablation of bone.
- Understand how Low Level Laser therapy can be a vital treatment for your surgical cases.
- See how the synergy between Lasers and the Dental Operating Microscope exists.

**Advanced Ergonomics in Microscope Dentistry & The Art of Microphotography**
Jorge Zapata, DDS and Juan Carlos Ortiz Hugues, DDS

**Facts and Applications:**
- Introduction to ergonomics in dentistry/hands-on Introduction to dental ergonomics
- Operator Chair analysis. Different models and brands if possible.
- Microscope Ergonomic devices.

**Hands-On:**
- Operator Scope-Microscope - Patient Chair (Positions)
- Operator Scope-Microscope - Patient Chair-Assistant (Positions)
- Stretching and recommendations

**Course Description:**
Ergonomics, also known as human factors, is a multidisciplinary science concerned with finding ways to keep people productive, efficient, safe, and comfortable while they perform a task. The basic premise is to make the task fit the person, rather than making the person adjust to the task. Dentistry is one of the most demanding professions with a high incidence of musculoskeletal disorders. Many professions are retiring early because of back, shoulder, arm, wrist injuries. This course will outline the ergonomic benefits of the surgical microscope in dentistry, it will address appropriate posture while working with the microscope, how to position the microscope, how to position the patient and how to perform four-handed dentistry in order to work pain free, efficiently, and without stress. The course will also outline different stools available in the market, the properties of each and how to sit properly.

**Learning Objectives:**
- Learn how to shape the work space to match the person
- Understand and apply non-surgical and surgical techniques used in modern endodontics
- Apply minimally invasive and anorexia risk procedures in general dental practice
- Manage common complications associated with tooth extractions
- Analyze and evaluate surgical difficulty and manage risk assessment in medically compromised patients who need tooth extractions
- Perform current simple concepts and principles of GBR, including socket preservation, as related to periapical ostetogenic extractions
- Perform other frequent and common oral surgery procedures in the general dental practice
- Understand and avoid medico-legal issues associated with oral surgery by careful case selection and informed patient consent

**Modern Atraumatic and Surgical Extraction Techniques, Complications Management, Socket Grafting, GBR and Other In-Office Oral Surgery Procedures for General Dentists**
Thomas G. Wiedemann, MD, PhD, DDS

**Course Objectives:**
The course consists of lectures and hand-on training on porcine mandibles.

**Learning Objectives:**
- Understand and apply non-surgical and surgical techniques used in modern endodontics
- Apply minimally invasive and anorexia risk procedures in general dental practice
- Manage common complications associated with tooth extractions
- Analyze and evaluate surgical difficulty and manage risk assessment in medically compromised patients who need tooth extractions
- Perform current simple concepts and principles of GBR, including socket preservation, as related to periapical ostetogenic extractions
- Perform other frequent and common oral surgery procedures in the general dental practice
- Understand and avoid medico-legal issues associated with oral surgery by careful case selection and informed patient consent

**Hotel Accommodations**

**The Blackstone Marriott**
636 South Michigan Ave., Chicago, Illinois 60605 • (312) 447-0955

**The Blackstone, Autograph Collection**
The Blackstone, Autograph Collection in Chicago, is just steps away from Grant Park and Columbia College Chicago. This 4-star hotel is 0.3 mi. from Buckingham Fountain and 0.4 mi. from Art Institute of Chicago. Our Amenities include: 335 air-conditioned rooms with refrigerators, 50” flat screen Smart television, premium TV channels, wired and wireless Internet access available for a surcharge, Private bathrooms with bathtubs or showers, designer toiletries, hair dryers, phones, safes and desks. Fitness center, complimentary wireless Internet access, concierge services, and room service during limited hours. Additional features at this Beaux Arts hotel include wedding services, a fireplace in the lobby, and a ballroom. Enjoy Spanish cuisine at Mergat La Plana, a restaurant which features a bar/lounge. Buffet breakfasts are served on weekdays from 6:00 AM to 10:00 AM for a fee. Featured amenities also include a 24-hour business center, express check-in, and express check-out. For your Special Event, we have facilities measuring 1344 square feet including conference space.

**Making Reservations**
A dedicated website is now available for your attendees to book their hotel rooms online. Reservations can be made no later than Monday, September 21st, 2020 by calling 1-855-563-9749 or going online at https://book.passkey.com/go/AMED2020. All Guests will receive the special group rate of $249 per night, plus tax. Room, tax and incidentals are the responsibility of each individual.
## SCHEDULE OF EVENTS

### THURSDAY

AMED is a recognized ADA CERP Provider. ADA CERP is a service of the ADA to assist dental professionals in identifying quality providers of continuing dental education. ADA CERP does not approve or endorse individual courses or instructors, nor does it imply acceptance of credit hours by boards of dentistry. This course will provide up to 24 CE units. ADA CERP approved 5/1/19 - 6/30/22.
